

## Access Health Renewal Treatment FAQ

### Q: How many people with chronic infection and pain recover with your program?

A: So far about 95% of people who complete our program no longer have more than mild or occasional symptoms or disability (often none at all).

### Q: What's the longest time have people have had trouble before seeking your help?

A: Often it's been 15 years or more. How long and how much trouble it's been does not suggest the course or outcome with our program. It's simply that the problem was unknown and the right tools were not available to properly assist. With our efficient methods, many of these long term sufferers only take a handful of sessions to feel well again.

### Q: How many treatments would it take to help me recover?

A: Problems of pain and little to no congestion/infection are usually complete in around 5-8 sessions. Infection/congestion adds to the process: total sessions may be 10-12. However, people start feeling better and getting back to life activities as soon as the congestion is mostly relieved, which can be at or before the midpoint.

### Q: How long does recovery last?

A: Over time we've seen the treatment results remain resolved. We've had patients with pain who have remained relieved for over 20 years. Some people who were told they needed surgery for problems like dropped pelvic organs and had results with us have remained stable ever since (15+ years). Our longest Lyme patients have been stable for 4 years so far.

Access Therapy works on the basis of getting things back to normal. The iScan QRI Access Assessment ensures complete, validated results.

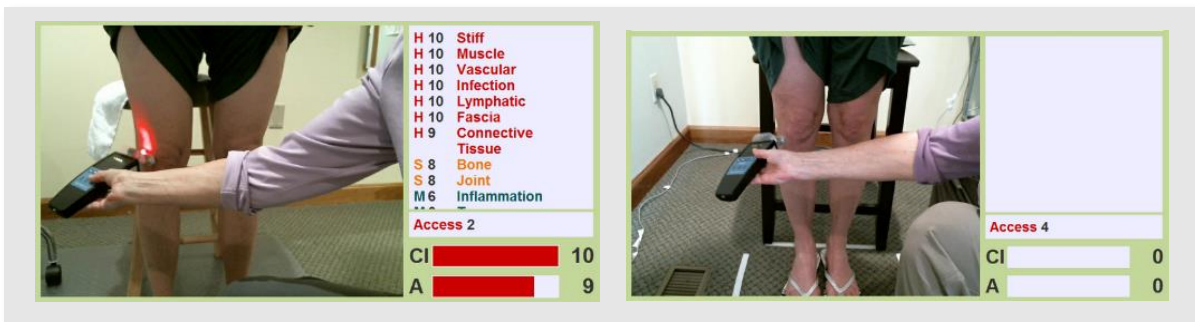

### Q: Does the treatment need "maintenance" or to be repeated a number of times?

A: Like cleaning out an attic – it's a process that progresses with increasingly more space opening up. At the end you feel liberated, living more freely and fully!

#### Precise detection, measurable results

Above: Lyme pocket, trapped infection at shoulder joint. Below: 2 months later, resolved.

Tick bite, Lyme infection entry location. Site resolved in 4 sessions. Patient well and stable a month later

**Q: Will I need to purchase supplements or other items to go along with my program?**

A: No. Many people have already completed supplements, antibiotics, etc. before they come to us and usually do not need additional as they progress through our program. Our methods help the body respond much better for those who are taking them or turn out to need them.

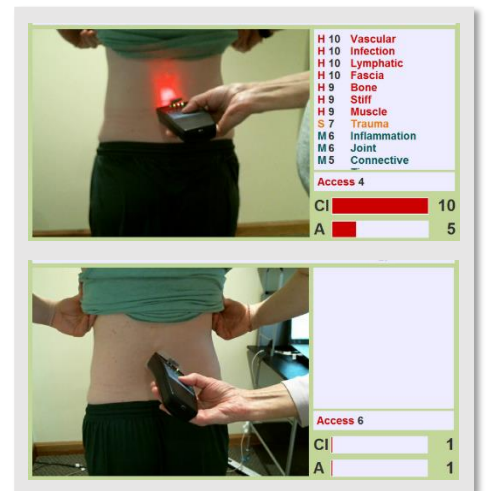

The therapy is efficient and powerful without needing to be forceful. Usually you fall asleep during some parts and enjoy pleasurable touch and relaxation during others.

Our treatment focuses on permanently eliminating the tensional stress that blocks flow of nutrients and immune factors and elimination of infection, biofilm, toxins, and waste products.

**Q: I have infection in my head/brain and/or spine. Can your program help?**

A: Yes, in a big way! Our heating modalities loosen the tissue around these areas and boost the “juiciness” within the structures, even deep within the cranial contents. Pressures from trapped congestion respond to the support and encouragement of our Access hands-on techniques.

We practiced advanced craniosacral and bodywork for over 25 years without these advantages, and the difference is tremendous, With our synergistic methods, infection and fluids can fully drain, the circulatory and immune systems can flow, and the cranial joints, nerves and membranes spring back with liberated mobility. These results can be immediately noticed and remain resolved so you can get back to work and back to life.

Lyme coinfection trapped in spine and brain. Brain fog, fatigue done: 8 sessions.

**What symptoms are relieved by the AHR treatment program?**

A: Fatigue, brain fog, pain, headache, depression, sleep problems, digestion and breathing symptoms, sinus problems, sore and swollen lymph nodes, mold too.

**Q: I’ve had many types of treatments, antibiotics, protocols, and supplements and am still not feeling well. Why is it so difficult to recover from chronic infections like Lyme or conditions that are unable to be identified?**

**Answer 1. The Elements Involved:**

- Fluid Flow:** necessary for nutrients, supplements, antibiotics, immune system; **can’t get to where needed**
- Mobility:** body’s substance needs to be springiness - **gets stiff** when in stress (inflammation, injury, attack)
- Barriers:** Infection makes biofilm, tissue walls off infection - **inaccessible** to being destroyed or cleaned out
- Regional nerve** reactions persist in **vicious cycle:** Fight or flight > resist > irritate > resist > irritate...etc.

**Invisible, but very powerful** and **interfering** with efforts to help. The body is **Too Busy** to respond.

**Answer 2. The Solution: The Access Health Renewal Program for Recovery from Chronic Infection and Pain**

**Precisely detect** locations of infection and resistance. **Free** with Access Therapy™ for complete resolution. **Promote** fluid flow and **stimulate** innate recovery resources with synergistic modalities and methods.
